(54) VISUAL FIELD BASE DISPLAY SYSTEM

(57) Abstract:

PROBLEM TO BE SOLVED: To perform display matching the movement of a user.

SOLUTION: Plural LEDs 12 are attached to a spectacle frame 10 mounted to the driver of a vehicle. By photodetectors 16 provided on the four corners of a display surface 14, light from the LEDs 12 is detected and the positions of the respective LEDs 12 are detected. Also, by the photodetector 18 provided on the spectacle frame 19, the line of sight of the user is detected. By controlling display to the display surface 14 corresponding to the position of the spectacle frame 10 and the line of sight of the user, the display preferable to the user is performed. Also, the selection of an icon by the line of sight of the user or the like can be performed as well.
